

## Transmission Stringing Travelers & Accessories

### Series 6045 Conductor Lifting Hooks

The Lindsey Series 6045 Conductor Lifting Hooks are cast from high strength ductile iron and coated with urethane. They have a safe working load of 4000 pounds, a 9" bottom of groove radius and are capable of accommodating a 30' line angle. The maximum conductor size is 1.8" in diameter.

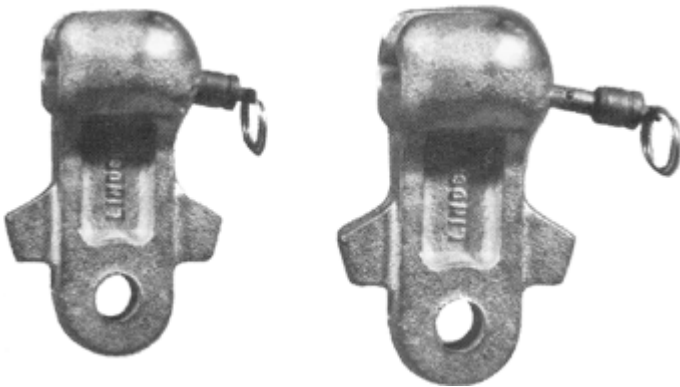

The Lindsey Series 6046 Conductor Lifting Hooks have a 15,000 pound safe working load and can accommodate conductors up to 3.0" in diameter.

### Series 6810 Lineman's Socket Eye

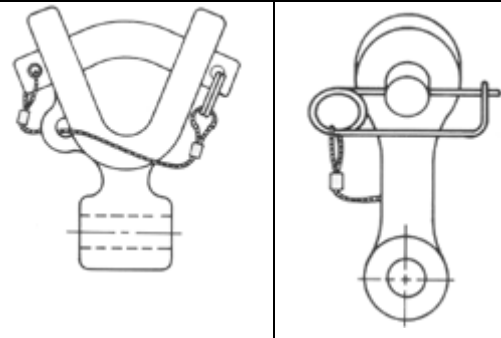

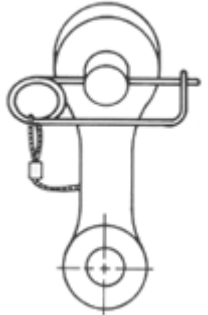

These Socket Eyes were designed for linemen. Unlike standard socket eyes with hard to handle wire socket cotter keys, the Ball Lock Socket Eye utilizes a push-pull ball lock pin in order to retain the insulator ball. They are easy to handle by linemen wearing gloves and save valuable time during erection and clipping-in operations.

These sockets are available for ANSI Class 52-3 and 52-5 insulators (rated at 30,000 pounds) and ANSI Class 52-8 and 52-11 insulators (rated at 50,000 pounds). To order, specify strength rating and eye dimensions.
