

Transmission Stringing Travelers & Accessories

Series 6050

The Lindsey Series 6050 Running Boards are designed to provide smooth transition through all Lindsey Bundle Travelers. The "Hardnose" design allows for pre-lifting of the pulling line swivel over the traveler pulling line sheave, and eliminates the possibility of damage to the tower or traveler.

All Lindsey Running Boards are proof tested to 150% of their rated safe working load and certified before shipment.

All Running Boards are manufactured from high strength, high impact resistant steel. Dead weight tail sections are designed to restrict upward motion of the tail beyond the conductors when the Running Board passes through a traveler.

All Lindsey Running Boards can be ordered for either two conductor, three conductor, four conductor or three conductor offset.

All Running Boards are available with factory installed Lindsey Swivels and 90' link connectors.
