

## Transmission Stringing Travelers & Accessories

### Series 6103 Offset Traveler

**6103 Series Offset Traveler**

**6650 Series Traveler with 6041 Automatic Uplift Roller and 6580 Traveler Ground**

Lindsey Mu It i-Bundle Travelers are designed to efficiently and economically meet or exceed customer requirements for two, three and four conductor stringing.

Our Series 6103 Convertible and 6153 Rigid Frame Three-Bundle Offset Travelers utilize a system of balancing two conductors with one. These sheaves have a separate groove for the pulling line and three additional conductor sheaves, each rotating independently.

The Series 6500 Convertible and 6550 Rigid Frame Two-Bundle Travelers provide a spacer drum which allows the subconductors to be separated by 18". All sheaves rotate independently and, therefore, the 6500 and 6550 can also be used for stringing three conductors in a balanced configuration. In this design, the pulling line and center conductor run in the same lined sheave.
