

## Transmission Stringing Travelers & Accessories

### Series 6504 Traveler with 6010 Helicopter Attachment & 6120 Traveler Legs

Our Series 6104 Convertible, and 6154 and 6504 Rigid Frame Bundle Travelers provide for easy stringing and sagging of four subconductors. A fifth pulling line sheave allows for a balanced configuration. All Lindsey Bundle Travelers can be equipped with stringing accessories such as traveler grounds, automatic uplift rollers, helicopter attachments, header bars and traveler legs.

Material used in the construction of the Lindsey Bundle Traveler sheaves and Convertible Traveler arms is of lightweight, high strength aluminum alloy. All rigid frame designs use only high strength, high impact resistant, hot dip galvanized steel. The sheaves are equipped with precision ground, deep groove, shielded ball bearings.

Sheaves may be purchased with polished aluminum grooves or permanently bonded high visibility red urethane or black conductive neoprene linings.
