

Tools

Wire Puller (Simple Operating Procedure)

Hold the handle in the right hand with the thumb on the lever and index finger above tape.
 Hold the tape in the left hand.
 Pulling the lever back releases the tape for pulling or pushing.
 Pushing the lever forward locks the tape.

To feed tape into the conduit, press the lever forward and feed the tape with the left hand. Do not rotate the drum with the left hand.

To pull wire through the conduit, use a "jacking action" with the right arm, guiding the tape with the left hand. Do not rotate the drum with the left hand. This way the tape is automatically locked on the pull and wound in the drum on the stroke toward the conduit.

Factory reconditioning available at nominal cost
